DESCRIPTION

Thanks to its PE coating, JadeBoard® Duo PE is perfectly suited for cool and humid conditions in cold storage or deep-freeze rooms. A special feature of this solid board is its thin wall thickness, which promotes faster freezing and is therefore ideal for the rapid freezing of frozen products. Thanks to its PE-coated surface, JadeBoard® Duo PE is highly water-repellent, resistant to humidity, and dust-free. The PE side is available with or without corona treatment. This product is also ideal for packaging non-food items.

APPLICATION

Cost-effective solid cardboard packaging solutions for versatile, high-performance, and sustainable shipping or retail packaging.

The general application recommendations are subject to technical material testing during further processing and for the end use, as the wide range of possible applications can result in various factors affecting the entire supply chain.

We would be happy to assist you in analyzing the application steps and selecting the appropriate material for your needs.

SUITABLE FOR

- moist foods
- dry foods
- fatty foods

TECHNICAL SPECIFICATIONS

- Gram per square meter: 650 to 1250 g/m²
- Surface: uncoated, laminated
- Gluing: glued COBB60, water-repellent
- Colors: brown, white

CERTIFICATION

- Certified for direct contact with moist and fatty foods
- FSC®
- Recyclable according to standard EN 13430
