

JADEBOARD® DUO PE

Inline laminated PE coated recycled board for individual packaging requirements for light to heavy packaging solutions.

COMPOSITE MATERIAL DUST-FREE OFFSET PRINTABLE

PE COATING STABILITY STRENGTH SUSTAINABLE

WATER-REPELLENT

COOLSAFE

PRINTABLE

DESCRIPTION

The PE coating makes JadeBoard® Duo PE perfectly suitable for cool and damp conditions in cold stores or freezer rooms. A special property of solid board is its low wall thickness, which promotes shorter freezing processes and is therefore ideal for quick freezing for frozen products. The PE-coated surface makes JadeBoard® Duo PE highly water-repellent, resistant to humidity and dust-free. The PE side is available with or without corona treatment. Non-food products can also be packaged very well with this product.

USAGE

Cost-efficient packaging solutions made of solid board for versatile, high-performance and sustainable transport or sales packaging.

The general application recommendations are subject to technical material tests in further processing and for the end use, since due to the wide range of possible applications different influences can arise along the entire supply chain.

We will be happy to help you analyze the application steps and select the right material for your needs.
